

EDUCATION

- **Georgia Institute of Technology** Atlanta, GA
Computer Science (M.S.), Computing Systems (Full Stack, ML, HCI) Aug 2022 - Dec 2024
- **University of North Carolina at Chapel Hill** Chapel Hill, NC
Computer Science (B.S.), Statistics and Analytics Minor August 2018 - May 2021

SKILLS

- **Certifications:** AWS Certified Solutions Architect, SAFE for Teams (5.1)
- **Languages:** Java, Python, JavaScript, TypeScript, HTML, CSS, C#, SQL
- **Frameworks:** Spring, Angular, Next.js, Node.js, .NET Core MVC, Azure, Kubernetes, Docker, Maven

EXPERIENCE

- **MetLife** Cary, NC
Software Engineer June 2021 - Present
 - Built full-stack applications, microservices, and REST APIs using Java (Spring), Python, SQL, Redis, and MongoDB. Utilized expertise in front-end development with Angular and React (Next.js) to create responsive, user-friendly interfaces.
 - Partnered with Product, QA, and DevOps teams to leverage Generative AI and LLMs (via Azure OpenAI Service) to add content summarization and chatbot capabilities into enterprise applications, significantly improving UX and expediting claims processing.
 - Utilized Generative AI tools, including GitHub Copilot and Microsoft Copilot, to save over 720 developer hours and improve unit test coverage by 55%, while conducting org-wide workshops on AI integration in web applications. Leveraged agents in GitHub Copilot to solve security vulnerabilities and improve application currency.
 - Architected and developed scalable, cloud-native applications using Azure Kubernetes Service (AKS), Docker, Istio, and Terraform, improving deployment frequency by 25% and reducing operational costs by 15%. Added monitoring with Prometheus and Kiali. Conducted deployments and resolved production outages.
 - Led Agile software teams through sprint cycles and cross-functional projects; collaborated with product, design, and infrastructure teams to deliver cloud-native features at scale.
 - Developed CI/CD pipelines using Azure DevOps to standardize build/release workflows and deliver deployment automation while also maintaining monorepo/multirepo strategy, branch protection, semantic versioning, conventional commits, and automated changelogs.
 - Improved application observability by implementing Azure App Insights into AKS clusters. Utilized this monitoring solution to implement performance alerts, troubleshoot production issues, and identify performance bottlenecks.
- **UNC Department of Computer Science** Chapel Hill, NC
Undergraduate Research Assistant Dec 2020 - May 2021
 - Developed a Google Docs extension that helps Linguistics Researchers convert Research Materials on COVID-19 to the Federal Government's Plain Language Format. This format is accessible to Americans with reading disabilities.
 - Coordinated with research teams and stakeholders across the CDC, UNC, and Georgia Tech to share findings, gather requirements, and test implementation of new software.
- **MetLife** Cary, NC
Technical Intern June 2020 - July 2020
 - Worked alongside Software Engineering teams to improve application performance and efficiency by connecting applications to database, designing efficient schemas, and improving query usage in applications.
- **UNC Department of Computer Science** Chapel Hill, NC
Undergraduate Teaching Assistant Jan 2019 - Dec 2020
 - Provided programming expertise, conceptual understanding, conducted exam reviews, and helped with independent projects for an introductory programming class.
